November 2nd-5th Episode Narrative

Heavy rain fell across portions of north Texas during the first part of November. These rains served as the precursor of a very wet month over the region. On the 2nd and 3rd rains were confined mainly to the southern and eastern portions of the area from near Hamilton, to Palestine, to Sulphur springs.

Widespread moderate to heavy rainfall occurred across north Texas on the 5th as a slow moving front progressed across the area. Numerous reports of flash flooding were received as the rain caused various degrees of damage over the area.
